Abbreviations and Data Notes  xiv
Foreword  xv

Overview  1
The problem  2
The framework of relationships—between clients, providers, and policymakers  6
What not to do  10
What can be done?  12

1 Services can work for poor people but too often they fail  19
Outcomes are substantially worse for poor people  20
Affordable access to services is low—especially for poor people  20
Quality—a range of failures  22
Making services work to improve outcomes  26

spotlight on Progresa  30

2 Governments should make services work  32
A public responsibility  32
Growth, though essential, is not enough  35
More public spending alone is not enough  35
Technical adjustments without changes in incentives are not enough  40
Understanding what works and why—to improve services  42

spotlight on Kerala and Uttar Pradesh  44

3 The framework for service provision  46
An analytical framework: actors and accountabilities  47
Why establishing relationships of accountability is so complex  52
Successes and failures of the public sector and the market  54
From principles to instruments  58
Reforming institutions to improve services for poor people will be difficult  60

spotlight on Uganda  62
4 Clients and providers 64
   When will strengthening the client-producer link matter most? 64
   Increasing client power through choice 66
   Increasing consumer power through participation 70
   Client power in eight sizes 74

   spotlight on the Bamako Initiative 76

5 Citizens and politicians 78
   Citizen voice and political accountability 78
   The politics of providing public services to poor people 81
   Beyond the ballot box: citizen initiatives to increase accountability 85
   Information strategies to strengthen voice 86
   Decentralization to strengthen voice 89
   Citizen voice in eight sizes 90

   spotlight on the Kecamatan Development Program 92
   spotlight on Norway and Estonia 94

6 Policymakers and providers 95
   Compacts, management, and the “long route” of accountability 95
   Increasing accountability: separating the policymaker from the provider 98
   Limits to accountability 99
   Overcoming the limits 100
   Provider incentives in eight sizes 106
   Scaling up, scaling back, and wising up 108

   spotlight on Cambodia 109

7 Basic education services 111
   Common problems of service provision 111
   For higher-quality systems, strengthen the relationships of accountability 113
   Citizens and clients, politicians and policymakers: voice 114
   Policymakers and organizational providers: compacts 117
   Organizational and frontline providers: management 124
   Client power 124
   Getting reform going 128

   spotlight on Educo 131

8 Health and nutrition services 133
   The health of poor people 134
   Market failures and government failures 136
   Strengthening client power 143
   Strengthening poor citizens’ voice 146
Contents

Compacts: provider incentives to serve the poor 149
Six sizes fit all? 154

spotlight on Costa Rica and Cuba 157

9 Drinking water, sanitation, and electricity 159
   The state of water and sanitation services 159
   Infrastructure and the accountability framework
      for service delivery 160
   Urban water networks 164
   Rural areas: network and non-network systems 171
   Sanitation 173
   Electricity 175
   Moving the reform agenda forward 176

spotlight on Johannesburg 178

10 Public sector underpinnings of service reform 180
   Strengthening the foundations of government 180
   Spending wisely 181
   Decentralizing to improve services 185
   Making, managing, and implementing good policies 191
   Curbing corruption in service delivery 195
   Managing transitions: overcoming reform hurdles 198
   Evaluating and learning 199

spotlight on Ceará 201

11 Donors and service reform 203
   Aid and accountability 203
   Strengthen—don’t weaken—the compact 204
   Let provider organizations manage 206
   Increase client power 208
   Promote voice 209
   Align aid delivery with service delivery 211
   Why reforming aid is so difficult 216

Bibliographical Note 218

Endnotes 219

Selected World Development Indicators 2004 249
Boxes
1  The eight Millennium Development Goals 2
2  Services—a public responsibility 3
3  Spotlight on “spotlights” 16
1.1  Who are “poor people?” 20
1.2  HIV/AIDS is killing teachers 23
1.3  School services for girls are not in high demand in Dhamar Province, Yemen 25
Crate 1.1  Determinants of health and education outcomes—within, outside, and across sectors 27–29
2.1  Most governments take responsibility for health and education—often appealing to human rights 34
2.2  The Fast-Track Initiative—providing assistance for credible national education strategies 36
2.3  Why it’s so hard to “cost” the Millennium Development Goals 41
3.1  A glossary for this Report 48
3.2  The many meanings of accountability 51
3.3  Creating conditions of accountability: the police 54
3.4  The “Progressive Era”: creation of modern bureaucracy 55
3.5  Seeking services in Egypt 56
3.6  Health care in Central Asia and the Caucasus: the long and short of it 59
4.1  The private sector is preferred in Andhra Pradesh, India 67
4.2  Bribery in Eastern Europe 68
4.3  Payment and accountability 69
4.4  No blanket policy on user fees 71
5.1  Why are public health and education services so difficult to get to poor people? 82
5.2  The “Curley effect” 83
5.3  Better to build rural schools than to run them well in Pakistan 84
5.4  Follow the public’s money 86
5.5  Down to earth: information technology improves rural service delivery 87
6.1  A good doctor is hard to find 96
6.2  Provider discretion can hurt the poor 97
6.3  Bribery hurts the poor 98
6.4  Learning to regulate 99
6.5  Be careful what you wish for—part 1 100
6.6  Be careful what you wish for—part 2 101
6.7  Incentive pay works for specific health interventions 102
6.8  NGOs can be more flexible than government 104
6.9  Is the GATS a help or a hindrance? 105
7.1  The dismal state of teacher training in Pakistan circa 1990 114
7.2  Test-based accountability—nothing new under the sun 119
7.3  School-based performance awards in Chile 121
7.4  Two large-scale cross-national assessments of learning 122
7.5 Randomized experiments in Busia district, Kenya 123
7.6 School improvement in Cambodia 125
7.7 Alternate routes to basic education in Ethiopia 126
7.8 Education reform and teachers’ unions in Latin America 129
8.1 Ethnicity and health 134
8.2 Making health services work for poor people in the Islamic Republic of Iran 135
8.3 The changing mix of cure and care: who treats what, and where? 139
8.4 Buying results to reach the Millennium Development Goals 142–143
8.5 Vouchers for sex workers in Nicaragua 145
8.6 Making health insurance work for poor people 146
8.7 The government as active purchaser of health outcomes through strategic contracting 149
8.8 The risks of capitation payments 150
8.9 Modulated payments for providers according to income criteria 151
8.10 The human resource crisis in health services 154
8.11 Developing a professional ethos in midwifery 154
9.1 Clientelism in service delivery 163
9.2 Decentralization and the water industry—in history 164
9.3 Trends in private participation: water, sewerage, and electricity 166
9.4 Private participation—in history 167
9.5 Private participation in water and sanitation can save poor people’s lives, and money 168
9.6 Charging for water—in history 170
9.7 Fighting arsenic by listening to rural communities 173
9.8 Are pipes and wires different? 175
10.1 The impact of Argentina’s crisis on health and education services 181
10.2 The case of the missing money: public expenditure tracking surveys 185
10.3 Decentralization as a political imperative: Ethiopia 187
10.4 Many roads to decentralization: Latin America 187
10.5 Building local capacity: the role of the center 191
10.6 “Yes, Minister” 192
10.7 Managing the thorny politics of pro-poor service delivery reforms 198
10.8 Ready for results? 200
11.1 The debate over global funds: Uganda 205
11.2 Social Investment Fund: Jamaica 209
11.3 Donors support democratic governance 210
11.4 Donors support transparent budget processes: Tanzania 211
11.5 Why aid agencies focus on inputs 212
11.6 A case for harmonization in Bolivia 213
11.7 Linking budget support to performance 215
11.8 Pooling knowledge transfers 216
Figures
1  Progress in human development: off track 2
2  More public spending for the rich than for the poor 4
3  Water, water everywhere, nor any drop to drink 5
4  The framework of accountability relationships 6
5  It paid to vote for PRI 7
6  Increased public spending is not enough 11
7  Eight sizes fit all? 14
1.1 Child mortality is substantially higher in poor households 20
1.2 The poor are less likely to start school, more likely to drop out 21
1.3 Water, water everywhere, nor any drop to drink 23
2.1 National income and outcomes are strongly associated, especially in low-income countries 35
2.2 Changes in public spending and outcomes are only weakly related: schooling 37
2.3 Changes in public spending and outcomes are only weakly related: child mortality 37
2.4 The association between outcomes and public spending is weak, when controlling for national income 38
2.5 Richer people often benefit more from public spending on health and education 39
2.6 The dominant share of recurrent spending on education goes to teachers (selected Sub-Saharan countries) 40
3.1 The relationships of accountability have five features 47
3.2 Key relationships of power 49
4.1 Client power in the service delivery framework 65
4.2 Eight sizes fit all 75
5.1 Voice in the service delivery framework 79
5.2 Democracy’s century 81
5.3 It paid to vote for PRI 85
5.4 Eight sizes fit all 91
6.1 Compact and management in the service delivery framework 95
6.2 Eight sizes fit all 107
7.1 Poor children: less likely to start school, more likely to drop out 112
7.2 Fifteen-year-olds in Brazil and Mexico perform substantially worse on standardized tests than students in OECD countries 113
7.3 Increases in test scores per dollar spent on different inputs 116
7.4 School success depends on more than spending per student 120
7.5 Centralized exams have a strong impact on student performance 120
7.6 In Chile, good schools service students from every level of socioeconomic status 121
8.1 Reaching the MDGs in health: accelerate progress 134
8.2 Reaching the MDGs in health: focus on poor households 135
8.3 Poor people use high-impact services less 136
8.4 Richer groups do well in absolute terms 136
8.5a Poor women do not know much about HIV 137
8.5b Husbands say no to contraception 137
8.6 A public responsibility, but private spending matters 137
8.7 The public-private mix differs between poor and rich, and among interventions 138
8.8 Making health services easier to deliver, through standardization and empowerment 140
8.9 Community-managed health services increase utilization and reduce spending 144
8.10 High spending does not ensure more equitable immunization 150
8.11 Citizens exert power on both providers and purchasers 151
8.12 Six sizes fit all 155
9.1 Little progress in access to improved water and sanitation, 1990 and 2000 160
9.2 24-hour water: a pipe dream 160
9.3 Water and sanitation by poorest and richest fifths 161
9.4 Alternative sources of water: poor people pay more 161
9.5 Accountability in infrastructure services 162
10.1 Strengthening public sector foundations for service delivery requires coordinating multiple compact relationships 180
10.2 Subnational shares of expenditures vary considerably 186
10.3 Decentralization and the service delivery framework 188
10.4 The anatomy of policy mismanagement at the top 192
10.5 Working to keep citizens educated, healthy, and safe 193
10.6 No straight roads to success: sequencing budget reforms 194
10.7 From weak basics to strong foundations in public sector institutional reforms 195
10.8 Many forces at play in curbing corruption in service delivery 197
11.1 The feedback loop between beneficiaries and donor country taxpayers is broken 204
11.2 Donor fragmentation: on the rise 206
11.3 Bureaucratic quality declines with donor fragmentation in Sub-Saharan Africa 208

Tables
1 Economic growth alone is not enough to reach all the Millennium Development Goals 3
1.1 The nearest school or health center can be quite far 22
1.2 Staff are often absent 24
1.3 Absence rates vary a lot—even in the same country 24
2.1 Public expenditures on health and education: large but varied 33
3.1 Organizational providers take a variety of ownership and organizational structures 50
3.2 Examples of discretionary and transaction-intensive services 53
3.3 Modern institutions took a long time to develop 61
5.1 Pro-poor and clientelist service environments when the average citizen is poor 80
7.1 In Madagascar, at higher levels of education unit costs are much higher and participation of the poor much lower 117
7.2 Schools account for only a small part of variance in student learning outcomes (percent) 118
7.3 Autonomy and outcome in Merida, República Bolivariana de Venezuela, in the mid-1990s 125
8.1 Selected examples of obstacles for the delivery of health and nutrition services to the poor 141
8.2 Affordability remains a problem for the poor 144
8.3 How do we know whether poor people’s voices have been heard? 147
10.1 Fallible markets, fallible governments, or both? 182
10.2 Decentralization is never simple 189
10.3 Walk before you run 196
11.1 So many donors . . . 207
